Model performance evaluation

Precision macro-averaged (%)
High precision means that the classifier returned substantially more relevant results than irrelevant ones.

Group By: Correctness

Recall macro-averaged (%) or Sensitivity

The probability that the model predicts a positive outcome for observation when indeed the outcome is positive. High recall means that the classifier returned most of the relevant results.

30.33

45.45

F1-Score macro-averaged (%)

The F1 score can be interpreted as a harmonic mean of the precision and recall, where an F1 score reaches its best value at 1 and worst score at 0.

36.38
